Lee Clontz

As the primary administrator of the Cascade Web Content Management System in the Division of University Technology Services, Lee has been integral to the successful deployment of over 60 University websites in Cascade.

Lee trains, advises and collaborates with the community to make the transition to Cascade a smooth and friendly one. The Cascade system improves efficiency and reduces costs for web content management. With this transition, departments and units can now focus on the content of their websites instead of style, branding, design or technical proficiency.

Additionally, he has automated the process of site provisioning using web services programming. What once took 19 steps, 30 minutes and more than 100 error-prone clicks now takes one click, two scripts and mere seconds, resulting in no errors. This innovative improvement in efficiency not only returns valuable time to the department, but also greatly enhances the customer experience by providing quicker turnaround times per requests.

Lee's role in making Cascade a success is evidenced by the numerous accolades from his customers. His contributions in the category of innovation have resulted in increased efficiency and decreased costs in University Technology Services and the University.
